

Index of site specific tables

Initial assessments of study group patients

SS1	Data availability for simple comparison of patients proceeding from initial contact or referral to initial assessment
SS2	Completeness of usable data in Study Group patient records in datasets supplied by sites
SS3	Patient progress overview by site
SS4	Age specific rates for engagement with the service, women
SS5	Age specific rates for engagement with the service, men
SS6	Age specific gender ratios, all study group patients, by site
SS7	Numbers of study group patients by ethnic group and site
SS8	Indirectly age-standardised ratios for entry to study group for ethnic groups by gender
SS9	Disabilities and spoken English status of study group members by site.
SS10	Sources of referral of study group members by site
SS11	Initial employment and social security benefit status of study group members.
SS12	Primary diagnoses: completeness and pattern by site
SS12a	Mean initial PHQ9 and GAD7 scores for study group patients with diagnoses indicated as either primary or secondary diagnosis.
SS13	Completeness and caseness levels, initial symptom and W&SAS scores
SS14	Initial symptom and W&SAS scores: medians and inter quartile ranges for sites

Treatment and outcomes

SS15	Totals for the three counts of patient contacts by site, and average contacts per patient.
SS16	Numbers of therapist contact sessions reported by staff grade
SS17	Totals for treatment sessions by type of therapy reported by sites for study group patients.
SS18	Pattern of treatments for study group patients with finished episodes of care who received at least some treatment.
SS19	Patterns of low intensity treatments received by study group patients with finished episodes
SS20	Patterns of high intensity treatments received by study group patients with finished episodes
SS21	Reasons for ending care episodes, all study group patients with completed episodes
SS22	Numbers of recorded contacts for treatment by broad treatment category
SS23	Treatment in relation to primary diagnosis
SS24	Recovery and incidence rates, net rate changes, seven recovery markers - 'complete data only method'
SS25	Recovery and incidence rates, net rate changes, seven recovery markers - 'second unknown, no change method'
SS26	Employment / benefit status progress
SS27	Changes in symptom and W&SAS scores for patients having CBT in four main diagnostic groups.
SS28	Symptom score changes, effect sizes and 'remission' and 'recovery' rates for comparison with pilot work
SS29	Service level outcome and service characteristics used for correlation analysis

Table SS1

Data availability for simple comparison of patients proceeding from initial contact or referral to initial assessment.

The table shows total numbers of patients having low intensity interventions (irrespective of whether they received high intensity as well), numbers having multiple types, having each type (patients may be multiply counted in this section) and receiving the most common combinations of approach. In this final section of the table, combinations accounting for more than 15% of a site's low intensity patients are marked in bold. Individuals in this section may be having other treatments as well.

SS20

Table shows for each broad treatment group, the number of patients, the proportion with missing appointment count by purpose (treatment) data, the range of session counts and the median and IQR for the number of sessions where reported. Two sites (North Lincolnshire - site 32 and Shropshire - Site 29) are missing as they did not report session numbers by session purpose.

Table shows for each broad treatment group, the number of patients, the proportion with missing appointment count by purpose (treatment) data, the range of session counts and the median and IQR for the number of sessions where reported. Two sites (North Lincolnshire - site 32 and Shropshire - Site 29) are missing as they did not report session numbers by session purpose.

Treatment in relation to primary diagnosis. Numbers of study group patients with finished episodes in each of the four largest diagnostic categories and proportion receiving each type of high intensity treatment by site.
